SUMMARY

Business Intelligence analyst with internship experience building **ETL pipelines, BI dashboards, and data-driven automations** that improve operational efficiency. Comfortable using **SQL and Python** to turn messy, inconsistent datasets into reliable reporting systems used by cross-functional teams. Enjoys owning problems end-to-end — from understanding the business need to shipping something that actually gets adopted.

EDUCATION

University of Louisiana at Monroe

B.S. Computer Science, GPA: 3.68

Monroe, LA

Aug. 2022 – May 2026

- Achievements: **Dean's Scholar**; NSA Vice-President; Elevator Pitch Contest – 3rd Place
- Relevant Coursework: Database Management, Data Structures & Algorithms, Statistics, Artificial Intelligence

TECHNICAL SKILLS

Languages & Querying: SQL, Python (pandas, NumPy)

Business Intelligence: Power BI (DAX, Power Query, Row-Level Security), Tableau, Excel (Power Query, Pivot Tables)

Analytics Engineering: ETL Pipelines, Data Modeling, dbt, Databricks, DuckDB, Power Automate

Reporting & Governance: KPI Documentation, Metric Definition, Requirements Gathering, Stakeholder Reporting

Cloud & Tools: Azure, GCP, AWS (conceptual familiarity), BigQuery, Microsoft Fabric, Git/GitHub

EXPERIENCE

Business Intelligence & Analytics Intern | *promoted from Data Analytics Intern*

Dura-Shiloh Industries

Jun. 2025 – Dec. 2025

Auburn Hills, MI / Remote

- Partnered with **C-suite and cross-functional stakeholders** to gather requirements, define competing metrics, and translate leadership objectives into **15+ structured KPIs** — improving cross-plant performance visibility across **14 facilities**.
- Took ownership of core **BI reporting products** tracking **\$50M+ in operational KPIs**, becoming the go-to contact for weekly strategic reporting after earning the team's trust early on.
- Designed and maintained **SQL/Python ETL pipelines** processing **100+ datasets weekly**, enabling **scalable data ingestion** for BI reporting — learned to handle inconsistent source systems by debugging failures and improving transformation logic iteratively.
- Identified a **\$500K inventory discrepancy** nobody had caught — traced it to systemic labeling failures through SQL forensic analysis and collaborated with finance and operations to implement **data quality guardrails**.
- Spotted inefficiencies in the monthly reporting workflow and **independently rebuilt it using Python automation**, cutting cycle time by **1 week** and freeing **20+ finance hours** per cycle — then documented it so the team could maintain it without me.

Data Analyst Intern

Nepal Red Cross Society

Jun. 2024 – Aug. 2024

Ramechhap, Nepal

- Gathered requirements from program leads across **6 districts** to design dashboards enabling **real-time operational monitoring** — first time owning a full project from requirements to delivery.
- Digitized **500+ patient records** into a structured SQL database, establishing data standards that reduced manual staff effort by **40%**.

IT Support Analyst

University of Louisiana at Monroe

Feb. 2023 – May 2025

Monroe, LA

- Noticed ticket patterns that no one had analyzed — built a **Power BI dashboard** to surface recurring issues and **Python automation** to route tickets, cutting triage time by **60%** and repeat incidents by **20%**.

PROJECTS

Autonomous Data Analysis Pipeline | Python, Gemini API, DuckDB, Streamlit | [GitHub](#)

Nov. 2025

- Built an **AI-assisted automated analytics pipeline** using Python and **LLM agents** to ingest, clean, and visualize datasets — reduced full reporting cycle from **4+ hours to 15 minutes** with no human intervention.
- Learned the hard way that bad input data breaks everything downstream — added **automated data quality checks** at each stage to catch issues before they silently corrupt outputs.

Healthcare Readmissions Reporting Platform | SQL, Power BI, Python | [GitHub](#)

Dec. 2025

- Designed and documented a **KPI reporting framework** across **4,000+ hospitals** using CMS and CDC datasets, defining metric logic, data sources, and refresh cadence in a structured **data dictionary**.
- Delivered **Power BI dashboards** with segmented risk profiles enabling researchers to self-serve insights and prioritize interventions for **600+ at-risk facilities**.
